Color picker exe

The app allows you to copy selected colors directly on the clipboard, so you can easily use them with other designer tools. ColorPic is a simple color picker tool so it will be perfect for first time users. The app is completely free, so you can use it without any limitations. → Download ColorPic These are the best paperweight managers you can use with your color selection software! 2. Just Color Picker Just Color Picker is another simple color picker software for Windows. The app has a fairly simple interface, and you can see the color selected with the magnifying glass section at any time. The app supports 10 different color formats and you can easily choose between HTML, RGB, HEX, CMYK, etc. All selected colors will be added to your palette, and you can easily export and save them for later use. You can also open, edit and save adobe Photoshop .aco color switches and GIMP .gpl pallet files. In addition, you can also add comments to your selected colors, providing additional details about them. The app has support for RGB, HSV or HSL adjustments so you can easily adjust the selected color. The app allows you to see the different shades of the selected color, and there is even a gradient view available so you can choose between a wide range of colors. In addition, there is support for both wheels colored RGB and RYB. If necessary, there is a text preview feature so you can see how your color compares to different backgrounds. As for the available colors, you can easily copy them by clicking on them. Just Color Picker is a simple application that offers a humble user interface that could hijack some users. The app relies on shortened alt-X for color selection, so you won't be able to select any color, even from the app, without using the shortcut. This sounds a bit confusing at first, but you'll get used to it after a while. All in all, Just Color Picker has no major flaws, so feel free to try it. The app is completely free, and thanks to the portable version, it will work on any PC without installation. → Download Just Color Picker 3. Instant Color Picker Unlike previous entries on our list, Instant Color Picker comes with the modern user interface, so it looks visually appealing. The app lets you choose what color of the screen simply by clicking on it. There is a magnifying glass tool that you can zoom in up to 8x and you can easily see the color code in it before you even select a color. When it comes to color sampling, you can use a single pixel, 3x3 or 5x5 sampling. Your palette can have up to 20 colors, and you can click on each recorded color and see more information about it. Available information includes color codes and color variations. If necessary, you can also change the lighting or saturation of the selected color. The app is pretty simple to use, and you can even choose a color by pressing a keyboard shortcut. After that, its color code will be on the clipboard so you can easily stick it to any other application. We should mention that Instant Color Picker supports the color formats RGB, HSL, HSV, CMYK, HTML, Hex, ActionScript, Delphi, VC and VB. Of course, you can easily get a color code in one of these formats and stick it to a different application. It is worth mentioning that you can save your color palette in image format, but you can also save it as a .aco format that is compatible with Photoshop. The app has a quick color palette feature that allows you to easily choose colors from a spectrum of colors. In addition, there are named colors so you can search the color list with ease. There is also a test layout feature that lets you see how different color combinations will look. Overall, Instant Color Picker is a great tool. The app has a modern design and it offers a wide range of features. It's also worth mentioning that the app is completely free so you can use it without limitations. → you download instant color picker looking for the best photo editing software? Here are our best choices! 4. CP1 CP1 is another simple color picker software that we wanted to show you. The app has a simple and modern user interface, so it's perfect for basic users. There is support for RGB and HTML hexadecimal format and you can easily copy any color code simply by selecting it. Color selection process is pretty simple, and after you start it, the app will turn into a large magnifying glass that allows you to select the desired color accurately. The app offers both wide and narrow Palette mode so you can see the different shades of the selected color. Of course, there is a story palette as well that records all your selected colors. It is worth mentioning that the application allows you to export and save your color palette .txt .json file. Unfortunately, .aco Photoshop file is not available. We should mention that CP1 does not allow color settings and you can not adjust the brightness, color or saturation which is a defect in our opinion. Overall, CP1 is a decent tool, but it lacks some advanced features that other entries on our list have. On the other hand, CP1 has a modern user interface and it is quite simple to use, so it is perfect for basic users. The app is completely free, and with the portable version available, you can use it without installation. → Download CP1 ColorPix If you're looking for a simple color-picking software, ColorPix might be perfect for you. This application is quite simple and it comes with color picker and magnifying glass. The magnifying glass allows you to zoom in up to 1600% so you can select the desired color with ease. The app is simple to use, and in order to select a color, simply hover with your cursor over the desired color and press any key on your keyboard. This will cause the lock color to lock locked. Once the color is locked, you can see its RGB, HEX, HSB and CMYK code available. If you need to use the In any other tool, you can simply click to copy it on the clipboard. With this feature, you can easily select any color on the screen and use its color code in any app. Although ColorPix is fairly simple to use, it doesn't offer advanced features. The app doesn't support color palettes, so you won't be able to save your colors. In addition, you can't change your selected color by changing its hue, saturation or brightness. Overall, ColorPix is a decent tool, but it only offers the most basic options when it comes to color picking. The app is completely free and portable, so it will be perfect for basic users. If you want a more advanced color picker, you may want to consider a different tool. → Download ColorPix 6. Pixie Pixie is another simplistic color picker software. The app is quite simple and does not offer advanced features. Pixie has a rather humble user interface that relies heavily on shortcuts for color picking. The main window will show you hex, RGB, CMYK, and the HSV color code of the currently selected color. However, you can't select colors and add them to palettes. Instead, you can use the shortened key to copy the hex value of the color. With this feature, you can easily use the selected color in any other application. The app has a magnifying glass, but to use it, you need to press a keyboard shortcut. We should also mention that the magnifying glass does not update automatically, so you will need to press the keyboard shortcut to update the preview. This seems to be a major flaw and it makes the magnifying glass more difficult to use. The app doesn't allow you to change color or saturation of the selected color, but you can open the color mixer with a keyboard shortcut and make some minor adjustments. Pixie is incredibly small application and portable, so it will work on any PC without problems. We should mention that this tool offers quite limited functionality, so it could be suitable only for the most basic users. One of the biggest flaws is the lack of color palette and history, so you can't save your selected colors. If you don't mind the lack of this feature, you may want to try Pixie, especially since it's completely free and portable. → Download Pixie Improve Your Work with these free photo editing apps for Windows 10! 7. GetColor If You Looking for a free and simple color picker, GetColor could be perfect for you. The app has a simple user interface that lets you choose any color on your screen. Picking colors is quite simple and you just have to drag and drop the eyedropper tool to select a specific color. After doing this, you'll see the color selected in RGB Hex, RGB Decimals and HTML format RGB. After selecting a color, you can easily copy its code to the clipboard and then use it in a different application. The app allows you to preview the selected color, but unfortunately there is not a magnifying glass tool that makes color picking a little more complicated. Speaking Missing features, there is no ability to customize your colors, and you can't change their hue or saturation. Also, you can't create a color palette and save your colors which is a major flaw in our opinion. GetColor is a simple color picker app, but it offers the most basic features, so it might not be suitable for advanced users. On the other hand, if you are a basic user who needs a simple color picker, this app could be exactly what you need. The app is completely free, so you can use it without any restrictions. → Download GetColor 8. Color Cop Color Cop is another simple and free color-picking software. The app has a humble interface that lets you select colors simply by dragging and dropping the eyedropper tool. For sampling, the application supports 1px, 3x3px and 5x5px sampling. There is also a built-in magnifying glass tool that can help you select any color you want accurately. The magnifying glass supports up to 16x zoom, which should be more than enough for most users. The tool has an automatic copy function that will automatically copy the color code selected from the clipboard so you can use it in other applications. As for color codes, the app supports html hex, Delphi hex and six additional formats. The app supports safe web colors, and you can also reverse the selected color, generate a random color, or convert the current color to a gray scale. The app also has a color history function that can memorize up to seven different colors. In addition, there is also a complementary color palette that has 42 different colors to offer. It is also worth mentioning that the application has a color mixer, so you can easily adjust the selected color. Color Cop is a solid tool, but we have to admit that there is no ability to save your palette, which is our only complaint. The app has a simple design that some users might not like, but despite its design, it's still a solid color picker software. This is a freeware application, and since it's fully portable, you can run it on any PC without installation. → Download Color Cop Here's the best photo album software to use on Windows 10! 9. Instant Eyedropper If you are looking for a simple and minimalist color picker software, we will have to recommend Instant Eyedropper. This app has a minimalist and it will run in your system bar once you start it. To choose a color, just click on the icon in the bottom right corner and drag and drop to the desired part of the screen. If you don't prefer the drag-and-drop method, you can change how the app works and click on the color to select it. Alternatively, you can use the keyboard shortcut to select the desired color. Once you turn on the color selection mode, you'll see a small magnifying glass with the selected color and color code. Instant Eyedropper will automatically copy the selected color code from the clipboard so you can use it instantly in one We should mention that the application supports several different color formats. List of available formats includes HTML, HEX, Delphi Hex, Visual Basic Hex, RGB, HSB and Long. We should mention that the app does not offer advanced options so you can't adjust your colors or save the color palette. In fact, there is not even a color history option, so you won't see previously selected colors. Even though Instant Eyedropper lacks advanced features, it's still a great app. The app is minimalist and you won't even know it's running. In addition, it is intuitive so

that even the most basic users will be able to use it. If you are looking for a simple color picker, we strongly recommend you try this tool. The app is completely free, and with the portable version available, you should be able to run it on any PC without installation. → Download Instant Eyedropper 10. PixelPicker If you're looking for freeware color selection software, you can try PixelPicker. The app is pretty simple to use, but we should mention that it works a little differently than other apps on your list. To choose a color, you must first drag and fall to the part of the screen that you want to use for color picking. After that, this section will be added to the magnifying glass and you will be able to zoom in with your mouse. Now you just have to drag and fall on your magnifying glass to select the desired color. After that, you will see the color selected with its code below the magnifying glass. Now you just need to click on the selected color and you can paste its code to any third-party application. In terms of color formats, the app supports 10 different formats, including RGB, ARGB, HTML, CMYK, HSL, HEX, etc. We should mention that PixelPicker does not allow you to record your colors, so there is no support for palettes or color history. The app is pretty simple to use, and you'll get used to it after a few tries. PixelPicker offers a simple user interface, so it's perfect for first-time users. The app is completely free, so don't hesitate to try it. → Download PixelPicker 11. Hex Color Finder Another freeware color selection software we need to mention is Hex Color Finder. The app offers a simple user interface that allows you to choose colors using the drag and drop method. After choosing a color, you can easily adjust the amount of red, green or blue. There is also a gradient so you can choose from a wide range of colors. Color palette function is available allowing you to store about 30 different colors for later use. The app lets you create presets so you can switch between different palettes with just one click. When it comes to color customization, you can reverse the selected color, change its lighting or contrast. Hex Color Finder is a simple color picker software, but it offers all the necessary features. Using this tool, you can easily copy the color code of any and use it in other applications. Unfortunately, you can't export color palettes, so you won't be able to use them in tools such as Photoshop. All in all, this is a simple application and as it is completely freeware we strongly advise you to try it. → Download Hex Color Finder Improve Your Projects with the Best 3D Modeling Tools Today! 12. ACA Color Picker Unlike previous entries on our list, ACA Color Picker is not a freeware application. The tool is simple to use and in order to select a color from your screen, you just need to move the mouse to the desired location and press the shortened key. We should mention that the application will automatically copy the color code on the clipboard so that you can use it with different applications. As for supported formats, the app offers standard, bytes, percentage and decimals as output formats. There is also a magnifying glass function that can zoom up to 36x. The app has a color palette so you can easily see all the selected colors. With the color export feature, you can save your palettes in .aco format and use them in Photoshop. You can also save the color list and use it later. If necessary, you can rename the colors to better distinguish them. There is also a color mixer so you can easily change the selected color. If you want to save space on your screen, you can always minimize the application to the system bar and it will continue to work in the background. ACA Color Picker is a decent tool and it offers almost all the features an average user needs. However, the app is not free, so to use it, you have to buy a license. Many other tools on our list offer the same features while being completely free, so if you want to save money, you may want to consider a different tool. → Download ACA Color Picker 13. Moo0 Color Picker There are many free and simple color pickers, and one of them is Moo0 Color Picker. The app has a minimalist interface and is quite simple to use. To take a screenshot, simply move your cursor to the desired color and tap the keyboard shortcut to choose your color. The app will show you the hex code of your color and you can easily copy it on clipboards with a single click. You'll be happy to know that you can adjust your color by changing its hue, saturation and lighting. The app also lets you preview your text in different environments so you can easily find the best combination of colors. Despite the simplistic user interface, the application doesn't have much to offer. There is no support for color palettes, so you won't be able to save your colors. In addition, the magnifying glass function is also absent making accurate color picking more difficult than it should be. Moo0 Color Picker is a basic color picker, and while it doesn't offer advanced features, it's simple to use so it's perfect for basic users. The app is completely free, so you can use it without any limitations. We should mention that will try to install some additional applications from this developer, so be sure to disable their installation during the setup process. → Download Moo0 Color Picker 14. Pixeur Another free color selection tool for Windows that we want to show you is Pixeur. This is a simple application that allows you to choose colors simply using the drag-and-drop method. If you pick colors for a website, you'll be happy to know that this app also supports web colors. Pixeur offers color mixer so you can easily adjust your colors by changing the RGB or CYMK components. In addition, you can also change color hue, saturation and balance. Once you select a color, its hex value will become available so you can easily copy it and use it in other applications. All your chosen colors will be available in the color history panel, and you can easily export the selected colors and save them for later use. Speaking of recorded colors, you can copy them in hex, inverted hex, RGB or long value format. Pixeur has a simple user interface that could be its only flaw. The app has all the necessary features so it is perfect for first time users. If you don't mind the app's humble user interface, feel free to try Pixeur. → Download Pixeur 15. ZZoom If you're looking for a minimalist color picker that doesn't have advanced features, you might want to consider ZZoom. This is a lightweight app that lets you choose any color on your screen. The app has a magnifying glass field that you can use to choose the exact color. The magnifying glass supports the 15x zoom and you can zoom in with your mouse wheel. It is worth mentioning the magnifying glass has a grid for more precision. The color picking is quite simple and relies on shortcuts. Simply move your cursor to the desired color and press the C button on your keyboard to copy the color code. After doing this, you can easily stick the desired color in the Hex format to any other application. We should mention that you are limited only to the Hex format, but you can see the RGB value of the color before choosing it. ZZoom is a simple tool so it doesn't offer advanced features. There are no color adjustments or color palettes, so you can't save your selected colors. On a positive note, the app is completely free and portable so it will work on any PC without installation. → ZZoom Design beautiful jewelry pieces with these great tools! 16. Color Archiver Another free color picker on our list is Color Archiver. With its simple user interface, this application is perfect for first-time users. To choose a color, you have to drag and fall to the desired part of the screen. After that, you just need to click on the magnifying glass and select the desired color. This method can be a bit confusing at first, but you'll get used to it after a few tries. The app lets you see color codes in RGB, Web, Long, CMYK and Hex format. In addition, you can easily copy the color code and use it in different different You can also adjust your colors and change HSL, HSV, RGB or CMYK values. If necessary, there is also a standard color mixer available for color adjustment. The app also has a color palette so you can save the desired colors and use them later. Color Archiver is a decent tool, but its humble design could distract some users. The app has a unique way to choose colors that might take you a few tries to get used to. All in all, this tool is completely free and portable, so feel free to try it. → Download Color Archiver 17. ColorMania ColorMania is another free color selection software for Windows. The app uses the drag-and-drop method to choose the colors and with the magnifying glass available, you can make precise selections. After selecting a color, you can adjust the amount of red, green and blue color as well as the brightness. In addition, you can adjust the hue, saturation and value of the selected color or choose a new color of the color wheel. The selected color is available in 12 different formats, including RGB, HSV, CMYK, etc. At any time, you can easily copy the selected color and use it in third-party applications. Speaking of colors, there is support for HTML colors and you can find some of the most popular colors by name. Creating custom palettes is also available, and you can save up to six different colors to your palette. Of course, you can export your pallet and save it for later use. Overall, ColorMania is a solid color picker app, and it has many features to offer. The app is completely free, so you can use it without any restrictions. → Download ColorMania Looking for the best 3D animation software? Here are our best choices. 18. Pickard If you're looking for a free portable color picker, Pickard could be the perfect choice for you. The app allows you to choose the colors of the color spectrum, but at the same time you can adjust the hue, saturation and brightness of your color. In addition, you can also change the amount of red, blue and green color directly from the color spectrum. On the other hand, you can also make precise adjustments by changing the RGB, HSL and CMY values. In addition, you can also adjust the level of transparency of the selected color. The app has an eyedropper feature that lets you choose any color on your screen. To do this, you must first select the part of the screen with the magnifying glass tool, then The color of the preview section. Colors come in six different formats and you can copy the color code with just one click. Pickard is a simple application and it works very well as a color picker, but it doesn't feature color palette. With this missing feature, you can't see previously selected colors and save colors for later use. Despite this minor flaw, Pickard is a solid tool and as it is completely free and portable, there is no reason not to try it. → Download Pickard Here is the best mosaic creation software for Windows PC users to create Visual. 19. Pipette Another solid color picker software for Windows is Pipette. Using this app, you can easily choose any color on your screen. In addition, the app has a color mixer available so you can choose your colors from it too. The selected color is represented in Hex, RGB and CMYK format and you can easily copy any color code with a single click. The app allows you to change color values, but you can also modify HSV components as well. The application is quite simple so that your color code is copied to the clipboard automatically. Another useful feature is the color list that allows you to record all your selected colors. You can choose one of the recorded colors at any time or even make adjustments to it. If necessary, you can also save the color list to a .txt file for later use. Pipette is freeware and portable, so it should work on any PC without installation. Overall, the app offers decent features, but there is no support for the magnifying glass that could be the only flaw of this tool. → Download Pipette 20. Toolkit Webmaster's Toolkit Webmaster's Toolkit is an excellent color selection software, optimized for web designers. But casual users can use it as well. Using this app, you can easily choose any color on your screen. To do this, you must first select the section of the screen that you want to use for color picking. After that, you just need to select the desired color from the preview section. The preview works like a magnifying glass and you can easily zoom in or out to select the appropriate color. The app will show you the hue, saturation and brightness of the selected color and you can easily change one of these values. In addition, you can also change the RGB or CMYK values. After selecting a color, its code will be available in hex format, and you can copy it with a single click. The app also offers a spectrum of colors so you can easily change the selected color or choose any other color. Toolkit Webmaster is a solid application, but it doesn't support color palettes which means you won't be able to save your colors for later use. The app is not free, but it is available for a free 30-day trial. → download the webmaster 21 toolkit. Corante Color Picker Corante Color Picker is another freeware and portable color picker for Windows. The app relies on keyboard shortcuts for color picking, and you just need to hover over the desired color and press the keyboard shortcut to select it. There is also a magnifying glass available that allows you to accurately select the desired colors. Of course, you can easily adjust the hue, saturation and brightness of any color. You can also adjust the amount of red, green or blue color or choose any color of the color spectrum. The app supports seven different formats, and you can easily copy the color code in Hex, HSB, RGB or Decimal format. Using this app, you can create your own color palette and save the list of selected colors in .txt file. Another great feature is the to export your color palette to the .aco and .gpl formats. With this feature, you can use your color palette in apps like Photoshop or GIMP. Corante Color Picker is a great app, and with the ability to export your color palette to Photoshop and GIMP, it will be a valuable asset for any designer. The app is completely free and portable, so be sure to try it. → Download Corante Color Picker Having Font Size Problems in Photoshop? Check out our quick solutions! 22. ColorPicker Screen Next tool on our list is Screen ColorPicker. This app offers a humble user interface that relies on keyboard shortcuts for color picking. However, you can also use the drag-and-drop method to choose the colors. Once you select a color, it will automatically be added to your color palette. From there, you can change the RGB values for your color in order to adjust it. As for the color code, you can see it in seven different formats and copy a desired code with a single click. You can save your color palette for later use, but you can also export it to .ase and .act files and use it with Photoshop or Illustrator. Screen ColorPicker doesn't offer any additional features, but it does a solid job as a color picker. The app is completely free and portable so it will work with any PC without installation. → Download colorPicker 23. Screen Color Capture If you're looking for free, portable color selection software, Screen Color Picker might be perfect for you. The app offers two methods for choosing colors, and you can choose colors in real time simply by pressing the assigned hot key. If you want a little more control, there is a screenshot mode available that allows you to choose the colors using the eyedropper tool. This mode also has a built-in magnifying glass so you can choose colors with precision and ease. It is worth mentioning that this method allows you to see both the mouse coordinates as well as the color code Hex and RGB. The app has a color history list so you can easily see all the colors previously selected. The colors are represented in the Integer format, so you might have some problems choosing the right color. If necessary, there is a spectrum of colors available so you can easily add new ones or change your color. Speaking of color settings, you can easily change the RGB or CMYK value of the selected color. There is also a adjust the HSB or HSL values as well. All colors are represented in the Integer or Hex color code and you can copy them to the clipboard with ease. Screen Color Picker is a solid color picker software because it allows you to choose between two color selection methods. Color history feature is a welcome addition, but since all your colors are listed in the Integer format, it might be difficult for you to distinguish them. Unfortunately, there is no ability to record or export your color palette, so you can't save the selected colors at all. Despite this flaw, it's still a great app so feel free to try it. → download Screen Color Picker Check out our new list to use the tools for photo collage! 24. Color Seizer Another color-picking software you may want to check out is Color Seizer. This is a simple application that uses the drag-and-drop method to select colors. After selecting a color, you can see its RGB and HSL values, but unfortunately you can't change them. For certain colors, you can easily copy them to any other HTML application, Delphi, Visual Basic, C- or RGB. If necessary, you can also choose one of the many preset HTML colors. The app has a spectrum of colors available so you can easily choose the desired color. You can't adjust the saturation or brightness of your colors, but you can choose the desired shade from the saturation and brightness gradients. Finally, the app has a color palette feature so you can easily save the desired colors and use them later. However, there is no option for exporting colors and you cannot save multiple color palettes. Color Seizer is a decent tool, but there is no magnifying glass or color export function that can be a defect for some users. Despite this flaw, it's still a solid app and it's completely free and portable, so you might want to try it. → Download Color Seizer 25. ColorBug If you are looking for a color selection software that has a wide range of features, you may want to consider ColorBug. To choose a color, you need to select the desired part of the screen, then use the area of the magnifying glass to choose the color manually. After choosing a color, you can easily adjust the HSL and RGB values using built-in cursors. The app also has a useful text box that lets you see how your color looks like compared to different backgrounds. Of course, the color palette function is available, and you can name your colors to easily differentiate them. It is important to mention that you can export your color palettes and use them with other designer tools. As for colors, you can see the color code in 13 different formats and you can easily copy and use it in any other application. ColorBug also offers some additional features, including the color step tool. With this tool, you can see different shades of color and choose any color for your project. In addition, the app offers a gradient tool so you can create gradients with ease. If you are a web designer, you will be happy to know that you can export the CSS code and use it for your projects. ColorBug is an excellent color selection software that allows you to have multiple color palettes and switch between them with ease. The app also offers some additional features such as gradient generator and color step tool. ColorBug is completely free, and with the portable version available, you should be able to run it on any PC without installation. → download ColorBug Conclusion Color picker software is a must-have if you are a designer, and there are many great color picking apps available. Most of the apps on our list are completely free and portable, so feel free to try them. FAQ How Do I have the color of my screen? You can choose any color from any pixel on your screen using one of the color pickers we mentioned above. Does Windows have a color picker? No, Windows doesn't have a built-in color picker. Therefore, you need to use third-party software tools like ColorPic. How do I choose a color from an image? Using a color picker, navigate to the pixel that contains your favorite color. Most tools lend you a screen magnifying glass to lend you a hand. After clicking on the color, it should appear in your application window, along with the RGB, hex, and other color codes.
